

# Accepted File Formats

As new versions of software are released, a brief testing period is needed before we can support them. Call your Sales Representative if you are unsure of our ability to support the version you are using.

While both application files and PostScript/PDF files are accepted, it is recommended that you supply PostScript/PDF files for text and application files for your cover to ensure smooth and stable processing through the all-digital prepress system. By supplying application files for your covers, we can easily make adjustments to the spine width, if required.

Please ensure that all fonts and images are in place and the file is saved to conform to Adobe Document Structuring Conventions (DSC). Your Webcom Representative will put you in touch with a prepress customer support specialist who will instruct you on the best way to save your file. It's very important that you save your files in a consistent format to ensure that you receive the full benefits of our CTP system.

## PostScript/PDF Files

Other software programs or platforms not listed may be supported; we are often able to accept PostScript® and/or PDF files generated from that application. PostScript® files must be saved to conform to Adobe Document Structuring Conventions (DSC). PDF files must have all fonts embedded. Contact our prepress specialists before supplying PostScript or PDF files. Below is a short reference list of some of the applications from which we can only image PostScript or PDF files.

Application	Macintosh	Win95/98	WinNT (Intel)	Win2000
Ventura 7.0		PS only		
Ventura 8.0+		PS/PDF	PS/PDF	PS/PDF
Microsoft Word	PS/PDF	PS/PDF	PS/PDF	PS/PDF
Microsoft Publisher		PS/PDF	PS/PDF	PS/PDF
WordPerfect 7.0+	PS/PDF	PS/PDF	PS/PDF	PS/PDF

## Adobe Portable Document Format (PDF)

We are happy to take print-ready PDFs generated from Acrobat 4®, Acrobat 5®, Acrobat 6®, Acrobat 7®, Acrobat 8® and PDF files generated by applications such as InDesign. The PDF Writer Driver commonly found in older versions of Windows is not acceptable for generating print-ready PDF files. Regardless of which file format you intend to submit, we strongly encourage you to take advantage of our free file testing service. Contact your Sales Representative for more information.
